Diego Soto Borja Almeida

Video Annotation Specialist | Multimodal AI Data Evaluator

Cancún, Mexico (UTC-5) · Remote · Native Spanish · Fluent professional English
zakhaarsol@pm.me · escanervibracional.com · play.redsolarviva.com · fotoncero.com

SUMMARY

Detail-oriented Video Annotation Specialist and digital creator with hands-on production experience in multimodal AI data evaluation. Currently delivering high-precision video annotation (multi-camera synchronization, spatial-temporal action boundaries, and object contact verification) for frontier AI training datasets at micro1. Combines a sharp eye for visual continuity, camera motion, and scene transitions with daily proficiency in media suites including DaVinci Resolve and Blender. Highly disciplined in adhering to extensive, evolving annotation rubrics without drift, documenting edge cases in clear objective English, and delivering consistent high-accuracy throughput.

CORE SKILLS

QA methods	Manual testing, functional testing, exploratory testing, test case design, edge case discovery, bug reproduction and reporting, regression checks, UI/UX consistency verification
Creative tools	Figma, Adobe Photoshop, Adobe Illustrator, DaVinci Resolve, Blender
Platforms	Web and mobile app testing (iOS, Android, macOS), cross-browser and responsive verification (Safari/WebKit, Chrome), real-device testing
Concepts	Export format optimization (image, video, audio), visual component architecture and design systems, localization QA, reduced-motion accessibility
Languages	Spanish (native), English (fluent, professional)

PROFESSIONAL EXPERIENCE

Video Annotation Specialist · AI Data Quality (Multimodal Robotics)

Sep 2026 – Present

micro1 · Remote contract · Under NDA: client name withheld

- Review long multi-camera video episodes of robotic manipulation (up to 8 synchronized views, about 18 minutes each) frame by frame and annotate them as AI training data; full-time load of 40 hours per week.
- Make precise visual and temporal calls: action boundaries, left vs. right arm, object contact, and whether the outcome matches the instruction, cross-checking camera views when one is occluded.
- Apply a long, evolving guideline with strict consistency; surface edge cases and inconsistencies, resolve them by the guideline's decision rules, and document true ambiguities in short, objective written notes.
- Self-QA every episode before submitting; deliver in a single pass at about 35% under the per-task time budget.

Founder, Product & QA · Escáner Vibracional / Red Solar Viva

2024 – Present

Cross-platform consumer app · iOS, Android, macOS and web · escanervibracional.com

- Own manual, functional and exploratory testing for every release on real devices before it ships: iPhone, Android, Mac and the web, in portrait and landscape, light and dark themes, Spanish and English, online and offline.
- Report bugs with exact steps, device, time and screenshots, then verify the fix on the same device; e.g., a launch animation that froze after the app resumed from background, and an invisible layer that silently blocked taps on iOS.
- Test the app's 2D creative tools: a rich-text note editor (formatting, color, highlight), a photo vision board, an avatar cropper and a wallpaper gallery, probing long text, empty states, large images and lost connections.
- Verify UI/UX consistency across the design system: light and dark themes built from shared tokens, a desktop visual grammar applied screen by screen, and about 3,700 bilingual interface strings checked for fit and tone.
- Catch rendering artifacts across engines and devices: a glow effect that made low-end Android Chrome drop card layers, fixed by rewriting it for that engine; app icons re-cropped to stay legible at 16 to 32 px.

SELECTED PROJECTS

Creator · Ludus Cero (2D and WebGL games)

2026 – Present

play.redsolarviva.com · pixel-art tactical RPG, exploration game, music-driven navigation game

- Playtest every build for pixel-perfect scaling to any window size, input across keyboard, mouse, trackpad and touch, difficulty measured room by room, and audio levels checked against approved references.

Founder · Fotón Cero (audiovisual studio)

2025 – Present

fotoncero.com · youtube.com/@zakhaarsolar

- Produce and quality-check animated music videos, series and game trailers for continuity, timing and intent; catch export defects (a stereo mix collapsed to one channel, effects masking the music) and define the corrected delivery settings in DaVinci Resolve.
- Ship the studio's screening site with video encoded in three qualities; found a video that flickered black on real GPUs (a CSS mask over the video) and verified the fix.
