

Diego Soto Borja Almeida

Bilingual AI Data Evaluator & Spanish Specialist

Cancún, Mexico (UTC-5) · Remote, flexible hours · Native Spanish (Mexico) · Professional working English
zakhaarsol@pm.me · escanervibracional.com · redsolarviva.com

SUMMARY

Bilingual (Spanish / English) AI data evaluator and native Mexican Spanish specialist. I review AI-generated text against written guidelines every day, judging fidelity, fluency and tone, and rewrite it when the model falls short. I localized a consumer app of about 3,700 interface strings under a locked glossary and style guide, and own its Spanish quality control. Since September 2026 I also evaluate and annotate multimodal robotics video for AI training, full time. Strengths: reviewing AI-generated output against written specs, catching confidently wrong answers, strong visual judgment, following long guidelines without drifting, and clear written English for rationales.

NATIVE SPANISH & LOCALIZATION

- Review and edit AI-generated Spanish every day for fidelity, fluency and tone: catch regional drift (Rioplatense voseo, or Spain's "bombilla" where Mexico says "foco"), wrong register, and punctuation that reads as machine-written; turn each fix into a style-guide rule.
- Localized the whole product: about 3,700 interface strings written in Spanish with their English versions, under a locked glossary of which terms never get translated and which have fixed equivalents. The same discipline as applying an annotation rubric.
- Author, as Zak'Haar, of Spanish-language nonfiction in the Códices de Luz book series (ebook, PDF and audiobook). Direct and QA Spanish AI voice narration: pronunciation, pacing, sibilance.

EXPERIENCE

AI Data Evaluator (Video Annotation Specialist) · Multimodal Robotics

Sep 2026 – Present

Remote contract · AI training data · Under NDA: client name withheld

- Evaluate and annotate long multi-camera video episodes of robotic manipulation (up to 8 synchronized views, about 18 minutes each) that become AI training data; full-time load of 40 hours per week.
- Make frame-accurate spatial and temporal calls across views: where each action starts and ends, left vs. right arm, object contact, and whether the outcome matches the instruction.
- Apply a long, evolving rubric with strict consistency; reason through ambiguous moments (occlusions, retries, overlapping actions) with its decision rules and flag true edge cases in short, objective English.
- Self-QA every episode before submitting; deliver in a single pass at about 35% under the per-task time budget.

Founder & Product Builder · Escáner Vibracional / Red Solar Viva

2024 – Present

escanervibracional.com · App Store, Google Play, macOS and web · Cancún, remote

- Built and ship a bilingual self-tracking app that measures six life domains and routes each user to a next action. Own specs, QA, store releases and all user-facing copy in Spanish and English.
- Evaluate AI output daily against written specs: check every change on real devices before release and catch regressions, confidently wrong answers and claimed checks that never ran; tighten the guideline when the model drifts.
- Built a two-stage vision pipeline (Google Cloud Vision OCR, then Gemini evaluation); review failures and edge cases (glare, curved bottles, low contrast) and rewrite the guideline when the model is wrong.

CREATIVE WORK

Founder · Fotón Cero (audiovisual catalog)

2025 – Present

fotoncero.com · youtube.com/@zakhaarsolar · Cancún, remote

- Run an independent catalog of animated music videos, original series and game trailers. Review sequences for continuity, timing, completeness of an action, and whether a shot matches the intended instruction: the same visual judgment used to label robot videos.

TECHNICAL & PRODUCT TOOLS

Product	React, TypeScript, Supabase, Capacitor (iOS, Android); App Store and Google Play releases
AI tools	Claude Code, Gemini, Cloud Vision OCR, ElevenLabs; prompt design and output evaluation
Media	Blender, ffmpeg; video, audio and voice review
